Unit 2 Practice Questions – THE PUBLISHING COMPANY

Part A Set Task Brief

You are advised to spend 10 minutes reading the Task Scenario and the activities you are to complete.

You may make notes and/or highlight information to use in the completion of the documents you need to produce for your task.

Task Scenario

You have been asked to create a database for the East Berkshire Publishing Company. Currently all records are stored on a spreadsheet.

The Company would like to be able to store and report data on how their books are published. The database will record information about:

- Authors
- Titles
- Editions

An edition is the actual physical copy of a book, which includes the type of book, publication date, edition number, number of copies sold and price.

The book type can be hardback, paperback or audio. The company wants the flexibility to add new book types at a later date.

There must always be at least one edition of a book sold.

If an edition sells between 2000 – 4999 copies it is bronze, 5000 – 10,000 it is silver and over 10,000 it is gold.

When a first print run is sold out (EditionNumber = 1), a second print run is done and these books are EditionNumber = 2.

Books cannot be published before 01/07/2020.

Activity 1: Database relationships screenprint (45 minutes)

Study the data extract provided in **Figure 1**.

Create an efficient database structure that:

- minimises data duplication
- accepts the data provided
- uses recognised naming conventions
- ensures data integrity.

Ensure you use **all** and **only** the fields shown in **Figure 1**.

Screen print your database relationships.
